

Data Warehousing

Saphere understand the performance issues of reporting from transactional systems, and have in-depth experience of both structuring the data warehouse for optimum performance and knowledge of the best data warehousing vendors. We are knowledgeable on all production systems including ERP, accounts, EPOS, HR/payroll, distribution, manufacturing etc.

Our consultants create leading data marts using Cognos decisionstream - the most robust system of all the data warehousing vendors - which lets you rapidly build and deploy a series of linked, subject area data marts that form an integrated business intelligence system. This ensures that all users have access to consistent data for more co-ordinated reporting and decision making across the enterprise. In addition, we can also create report-ready operational data using Cognos DecisionStream and Cognos ETL (extraction, transformation, and load) software that lets you unite disparate data into an integrated bi foundation to deliver the reports and analysis that make operational data available for timely reporting. We continue to research data warehousing vendors, but we continue to find no-one still comes close to Cognos. In fact, when IBM was looking to acquire a data warehousing vendors they ended up buying Cognos for \$5bn, providing more evidencve that they continue to be the best of the data warehousing vendors.
